

$$-\partial_t V - \frac{\gamma^2}{2} \partial_{yy} V - \mu \partial_y V - \frac{1}{4\rho} (1 + \partial_e V + (1 - \gamma) \partial_y V)_+^2 = 0$$

The parameters of the problem:

 $\gamma=0.5,~\alpha=0.1,~\beta=1,~\pi=q(1-q),~\eta(q)=\lambda(q)=q,~T=10,~\mu=0.1$ and $\varrho=0.9~(a=5),$ bounded domain for (t,y,e) is $[0,10]\times[-20,20]\times[0,20]$ with transparent Dirichlet boundary condition

$$V(t, e, -20) = \frac{(T-t)}{4\rho}, \quad V(t, e, 20) = -\alpha e + (1-\alpha)^2 \frac{(T-t)}{4\rho}$$

and terminal condition $V(T, e, y) = -\alpha e 1_{\{y>0\}}$.
